28. My friends always takes photographs of animals beautifully in nature on Fridays.  
.....

**Part IV: Reading Comprehension**

**A: Reading one. Read the passage and choose the best option. (4pts)**

An endangered language is one that is likely to become extinct in the near future. Many languages are falling out of use and being replaced by others that are more widely used in the region or nation, such as English in the U.S. or Spanish in Mexico. Unless current trends are reversed, these endangered languages will become extinct within the next century. Many other languages are no longer being learned by new generations of children or by new adult speakers; these languages will become extinct when their last speaker dies. In fact, dozens of languages today have only one native speaker still living, and that person's death will mean the extinction of the language: It will no longer be spoken or known by anyone.

**29. Which of the following statements is true according to the passage?**

- a. A few languages are falling out of use and being replaced by others.
- b. Dozens of languages have only one native speaker.
- c. One language won't become extinct.
- d. All languages will die out within the next century.

**30. The passage provides enough information to answer which of the following questions?**

- a. What does an endangered language mean?
- b. How can new adult speakers help new generations to learn some languages?
- c. What is the oldest language in the world?
- d. Which language has the most native speakers?

**31. The underlined word “widely” in line 2 is closest in meaning to.....**

- a. certainly      b. greatly      c. honestly      d. interestingly

**32. The word “it” in the last line refers to.....**

- a. language      b. speaker      c. extinction      d. death

**B: Reading two. Read the passage and answer the following questions. (4pts)**

Even when asleep, the body needs energy. The more active a person is, the more energy the body uses. The energy comes from the chemical “burning” of carbohydrates, fats, proteins, and certain other substances such as alcohol.

The energy values of different foods can be measured by burning them in a special small oven called a calorimeter. Energy in food is often measured in calories. One kilocalorie, usually written as kcal or calorie (with a capital C), is the amount of energy required to raise the temperature of one kilogram of water by 1° Celsius. In fact, the Calorie is a unit of heat, not energy. In the modern system of measurements, energy is measured in joules. (1 Calorie equals 4.2 kilojoules.) You can find the calorie content of almost any food by looking in a slimming magazine or book.

An adult needs, on average, a little under 3000 Calories a day. A manual worker would need 4000 or more, because of the energy used up in physical activity. Children, who are growing and also very active, need extra Calories as well. As people become older they need fewer Calories, partly because they are physically less active and partly because some of their body tissues become chemically less active.

**33. What does one kilocalorie mean?**

.....

**34. How can the energy values of foods be measured?**

.....

**35. Calorie is actually a unit of energy.**

- a. true
- b. false

**36. Old people need fewer Calories than manual workers.**

- a. true
- b. false
